

View and Scan Newspapers at Full Size

Affordable solution for newspapers and engineering size documents stored on microfilm. The ScanPro 500 is easy to use. You can view and scan an entire newspaper on 35mm roll film or an entire aperture card and the scans can be enlarged on the computer monitor for detailed viewing and for printing to large format paper.

What people are saying about the ScanPro...

"This machine is so easy to use. We are well on our way to getting more documents transcribed because of our new (ScanPro 400) scanner/printer. We are delighted with the product."

- Mary Ball Washington Museum & Library - Donna Helmuth, Lancaster, VA

"I really like this machine...(it is) a wonderful blend of technologies in a practical easy to use format.

- Adams County Library - E Stephen, Thornton, CO

"It is working its little butt off, just a fabulous machine".

- MyCensuses Genealogy - G Beavington, British Columbia, Canada

Easy To Use

The ScanPro 500 utilizes high resolution Rodenstock Lenses making it possible to easily view and scan full size aperture cards and newspaper images on 35mm film. One affordable price includes the ScanPro 500, combination fiche/aperture card carrier, one high resolution lens, all of the scanning software, and connecting cable. Just follow the instructions on the autorun install CD and you can be ready to e-mail, network, and print your scans to large format paper, right from your own PC.

Combination Carriers for All Formats

Combination carriers that provide robust operation and exceptional roll film positioning control. These carriers are available for handling fiche, aperture cards, 16 and 35mm roll film, and cartridge film without having to be removed from the unit to change film types. Ideal for demanding public use applications. Or, you can select the MC1635 motorized carrier for applications that do not utilize fiche or aperture cards.
